#### INTRODUCTION

#### 1.1 Purpose

This process specification provides information for creating an Era Aviation part number for a flexible hose assembly which can be called out on the next assembly "using" drawing.

#### 1.2 Hose Assembly Application

The hose assembly defined by this specification is a smooth-tube flexible tetrafluoroethylene (TFE) Teflon type hose reinforced with stainless steel wire braid and reusable end fittings. The hose assemblies are suitable for use in aircraft medium pressure fuel and engine oil systems. See Section 3, note 2 for applicable limitations.

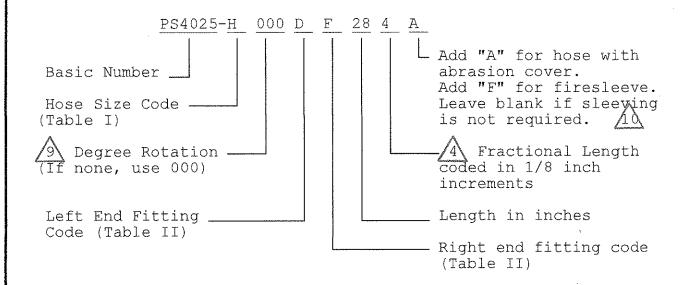

### HOSE ASSEMBLY PART NUMBERS

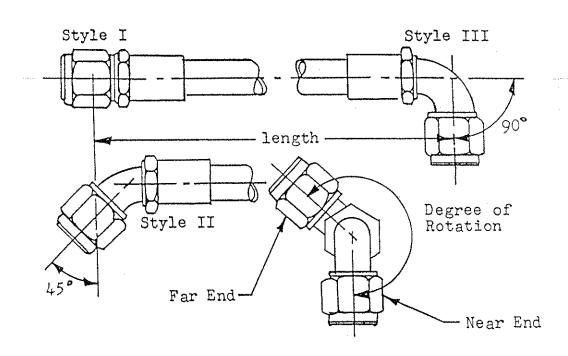

A hose assembly part number can be created or deciphered by examination of the "part no. code" and "example of hose assembly part no." sections shown in Sections 2.1 and 2.2, respectively. Use "Table I" and "Table II" in Sections 2.3 and 2.4, respectively, to code the hose size and end fitting style in the part number. The end fitting style refers to whether the fitting is straight, 45° angle, 90° angle 37° flared nut, or flanged and the fitting material (stainless steel or aluminum).

The notes in Section 3 provide specific information used in the specification of the hose assemblies.

# 2.2 Example Of Hose Assembly Part No:

PS4025-H000AC284A - Hose Assembly, .50 Inch Diameter Nominal Hose Size, 0° Rotation, Straight Steel Flared Fitting on the Left End of the Hose, 90° Steel Flared Fitting on the Right End of the Hose, 28 1/2 Inches Long with Hose Abrasion Cover

## 2.3 Hose Size Code

Use Table I to specify the code letter for the desired nominal hose size (inside diameter). Dash numbers shown are equivalent tubing outside diameter in 1/16" increments. The normal maximum operating pressure is also shown.

Hose Size	-3	-4	-5	-6	-8	-10	-12	-16	-20	-24
Code Letter	D	E	F	G	Н	J	K	М	N	P

Table II

#### NOTES 3

- Hose assemblies defined by this specification are intended to conform to MIL-H-25579 (medium pressure smooth-tube TFE-Teflon). Abrasion shield, if required, shall be as defined in Note 10.
- These hose assemblies are intended for use with MIL-T-5624 2. fuel and MIL-L-23699 lubricating oil with a fluid or ambient temperature operating range of -65°F to +450°F. See Section 2.3, Table I for normal maximum operating pressures. See vendor data for minimum bend radius and other limitations.

- a. Under 30 inches long = 1/8 inch increments only b. 30 inches long and over = 1/4 inch increments only
- Hose assemblies shall be fabricated in accordance with Era Process Specification PS4021, Type IV.
- This hose assembly shall have an integral braided polyester /6 N cover over the wire braided hose. The purpose of this cover is to provide abrasion resistance protection to the hose assembly.
- Identify each hose assembly per PS4021, Section 6. 7.
- Do not mix different hose vendor component parts in the same hose assembly.
- Angular orientation between the elbows is expressed in three digits. The angle is measured in degrees counterclockwise from centerline of the nearest fitting when positioned at 6 o'clock to the centerline of the other fitting as shown in the figure. If the desired orientation is zero degrees, specify "000".

DATE

06/09/00

A letter at the end of the part number designates the type of protective outer cover on the hose as follows:

" " = No code is an AE666 or AE667 hose with stainless steel wire braid on the outside without any cover

"A" = AE556 hose with blue braided polyester chafeguard

"F" = AE666 or AE667 hose with a captive AE102 silicone rubber firesleeve which is fire resistant per AS1055, Class A and can meet TSO C53a, Type C "Fire Resistant" requirements.

This is the vendor's part number of a specific hose used in the hose assembly. A letter shall be placed at the end of the part number to designate the size. Refer to Table I in Section 2.3 to determine the correct code letter for each size.
